

Digital Signage installations offer a high impact attraction for advertisers in retail outlets, engaging the viewer with innovative graphical adverts.

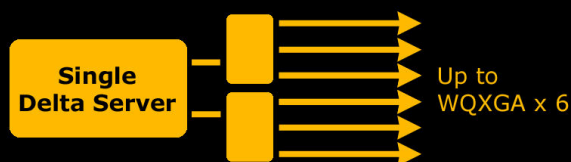

Delta Media Server, already fielded in airports throughout the UK, provides a high quality image source with low cost due to its high channel count from a single Delta PC.

Integrated within a content management system, Delta provides full external control over media playback, placement and timing, and additionally the comprehensive display matching abilities allow Delta to display moving content across flat panel arrays in any orientation, taking care of bezel gaps within our overall graphical canvas.

### Digital Signage Features

Delta incorporates many benefits for digital signage:

- Multiple graphics outputs per server

- Display bezel or overlap management
- Realtime aspect rotation and aspect ratio adjustment
- Overall system "Canvas" concept allows content created for the whole display managed within Delta
- Full external control allows tight integration with Content Management Systems
- Timeline serial events to trigger any external device
- Live Video Inputs for local camera feeds.

### Delta Features

Standard Delta includes:

- Uncompressed Movie Playback
